

Resistant to stains

The low porosity of Silestone surfaces is particularly stain resistant to many everyday products and different kinds of food.

Resistant to scratching

Quartz has a hardness of 7 in the Mohs hardness scale (diamond is number 10). This makes Silestone highly resistant to scratches

Resistant to knocks

The high resistance level and durability of Silestone®, far superior than other products with similar applications (granite, solid surfaces, etc), guarantee bathing pleasure, even when handling with tough objects.

Resistant to acid

Quartz is one of the strongest minerals known to man. This makes Silestone products extremely durable, with a high level of resistance to external aggressions.

Natural Quartz

Silestone is a compound made up of 94% natural quartz, which make it extraordinarily hard and resilient. This are the one and only surfaces made of quartz with anti-bacterial protection, giving it hygienic properties that are not to be found anywhere else on the market. It is an excellent surface for kitchen worktops, bathrooms, floors and wall cladding using the minimum number of joints.

Certified anti-slip surface

Our shower trays have been designed and tested to provide security inside the bathing area. The extensive quality and safety certifications were carried out under rigorous German regulations and product standards.

Bacteriostatic Protection

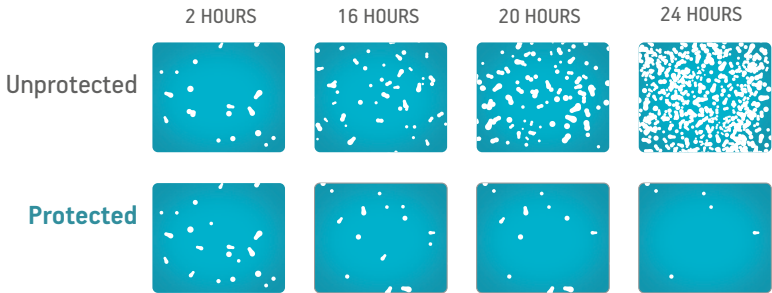

With Silver Technology

Silestone® is the only surfaces brand that includes an active hygiene system in its composition.

We achieve an effective protection that stops the spreads of a wide range of bacteria. This way, the Silestone® kitchen and bathroom worktops provide an added value in security and peace of mind for your home.

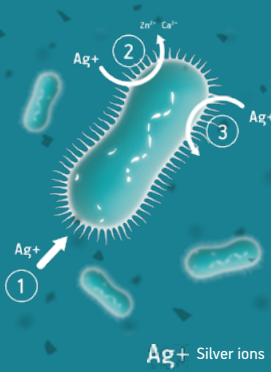

*This product does not protect users or others against food-borne (or disease-causing) bacteria. After each use, a cleaning of the quartz surface is always recommended.

Compared with quartz surfaces without bacteriostatic effect, the P+ protection achieved (after 24 hours) a germs reduction of nearly 99%

How does the Bacteriostatic Protection works?

- 1 Damage the cell membrane
- 2 Replacing Ca2 + and Zn2 +
- 3 Interacting with the cell components (S, O, N)

Standard shower trays with Suede texture

Width in mm	Length in mm.	Height	Texture	Reference + colour	Cemento Spa	Blanco Zeus	Carbono
